

I began my process by measuring out my insulin pen. The length was $5 \frac{3}{4}$ " , while the top bottom was $\frac{1}{2}$ "

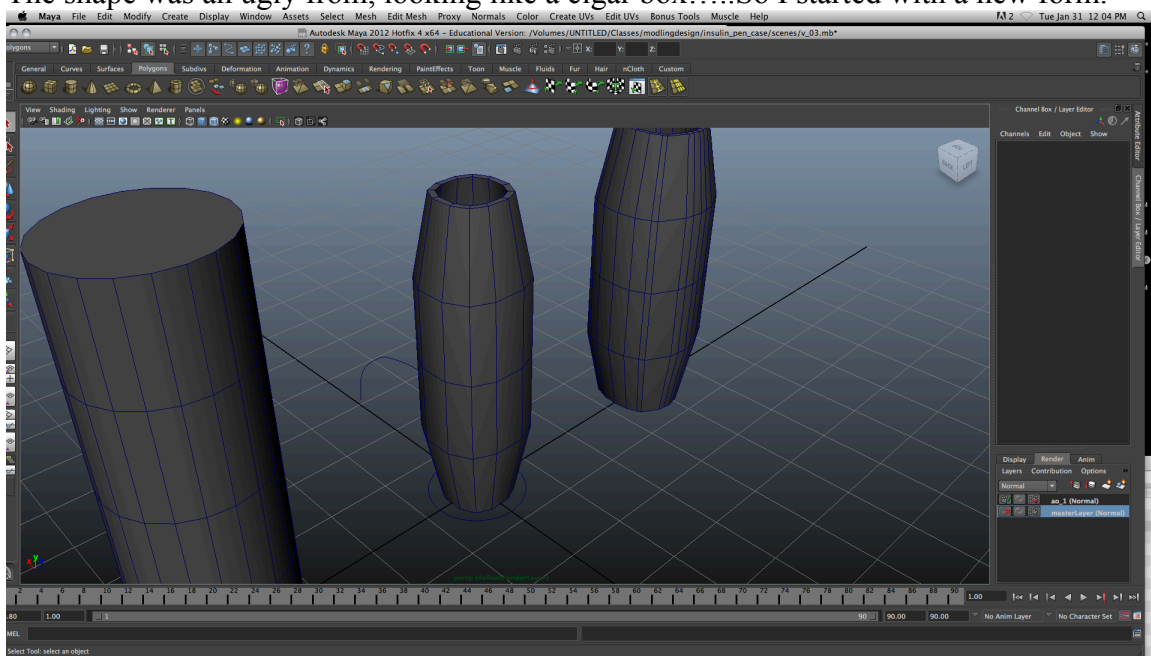

I knew that I wanted my shape to be cylindrical.....so here was the first result

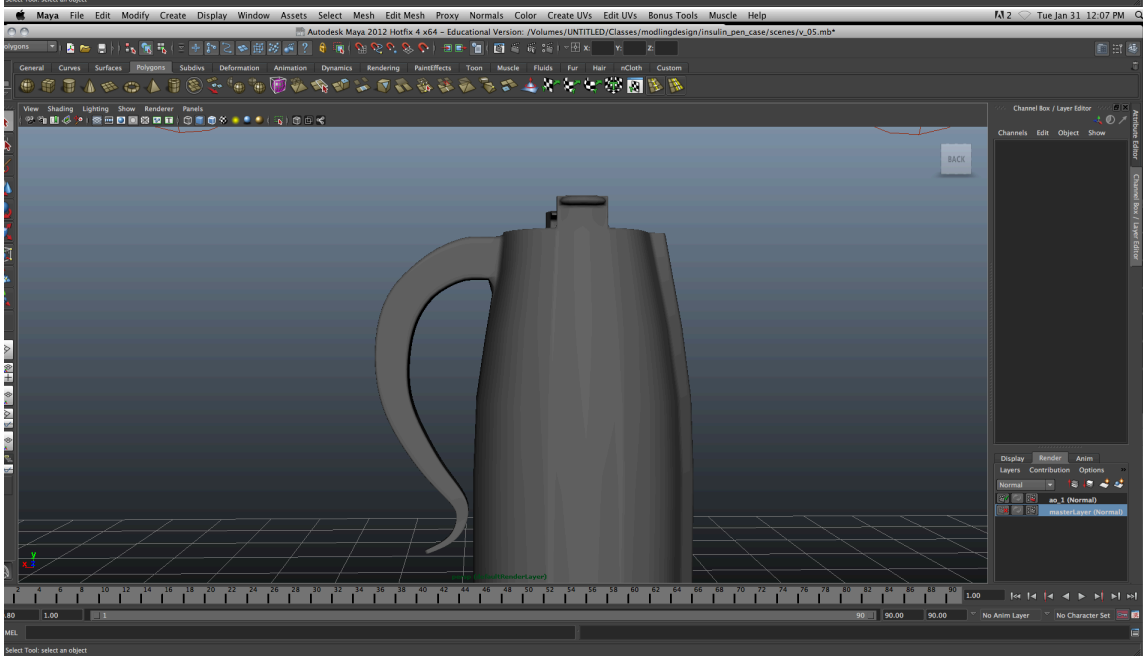

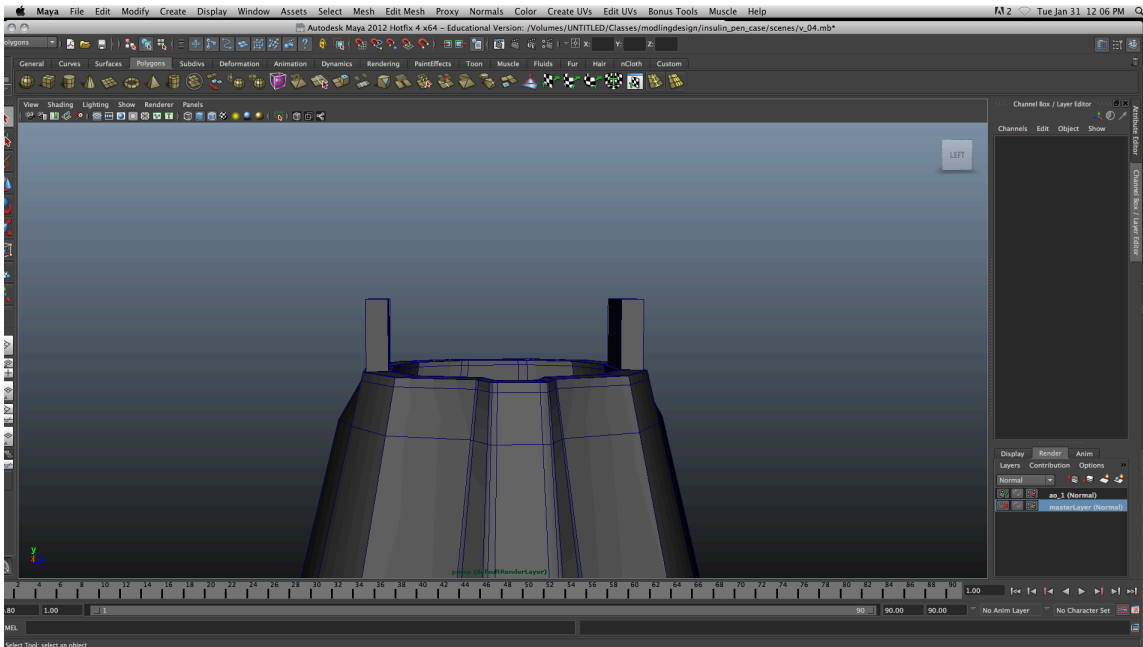

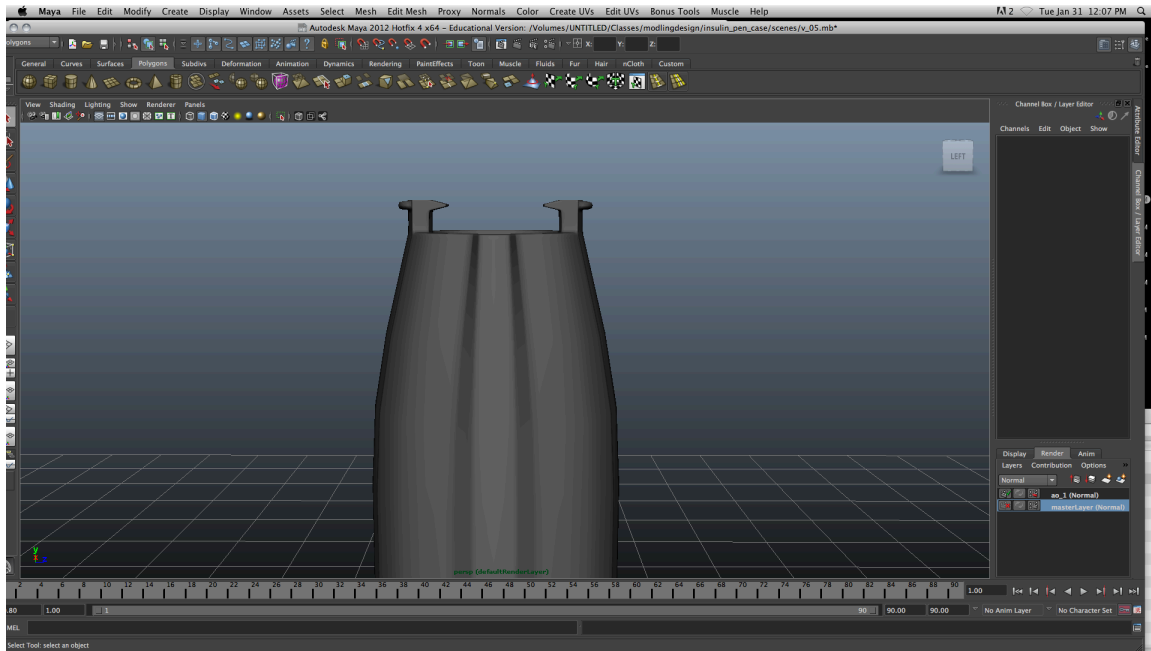

The shape was an ugly form, looking like a cigar box.So I started with a new form.

After I finally found a form that I liked, I started adding the handle, slot, and clips.

After getting my final form down, I took a picture of my insulin pen, which I should have done in the first place and scaled my model to better shape the pen.
