

# Possible Complications

# Preoperatively

---

## The Anesthetic Risk

With any surgery with any animal, there is always the chance that the animal reacts poorly to the preanesthetic medication or the anesthetic agents. This can lead to an effect like death.

# Intraoperatively

---

Haemorrhage

There is always the risk of bleeding during surgery.

# Post Operatively

---

Wound Dehiscence: From animal rubbing the side containing the wound against any surfaces, disrupting the sutures

(<https://www.youtube.com/watch?v=JHTgrSGjpYY>)

Peritonitis

Microbial Infection

Bloat/Toxemic Lactic Acidosis: From prolonged lateral recumbency leading to decreased rumen stasis

Tissue Reaction: There can be an inflammatory response mounted with respect
